As of 15 July 2023, globally, a total of 24 countries reported AWD/cholera outbreaks. In the Eastern Mediterranean Region of WHO, 9 countries namely, Afghanistan, Iraq, the Islamic Republic of Iran, Lebanon, Pakistan, Somalia, Sudan, Syria, and Yemen have reported Acute Watery Diarrhea (AWD)/ suspected cholera cases during 2022. In 2023, 7 out

of these 9 countries continued to report AWD/ suspected cholera cases in 2023.

During the reporting period (1-15 July 2023), a total of 31,456 new AWD/suspected cholera cases - including 13 associated deaths- were reported from 5 Member States:

Afghanistan (13,611 cases; 6 deaths), Pakistan (10 confirmed cholera cases; 0 death), Somalia (474 cases; 0 deaths), Sudan (300 cases; 7 deaths) and Syria (17061 cases; 0 death).

During the period of 1 January to 15 July 2023, cumulatively, a total of 203,417 AWD/suspected cholera cases-including 89 associated deaths- were reported from 7 Member

States: Afghanistan (98851cases; 46 deaths), Lebanon (2,197 cases; 0 death), Pakistan (84 lab-confirmed cases; 0 deaths) Somalia (11,160 cases; 30 deaths), Sudan (300 cases; 7

deaths), Syria (86,947 cases; 2 deaths), and Yemen (3,878 cases; 4 deaths).

risk communication and community engagement, and oral cholera vaccination.

While males and females are almost equally affected by AWD/ suspected cholera in the Region, most of the AWD/ suspected cholera cases in Afghanistan (50%), Somalia (60%),

and Syria (45%) are children under five years of age. In Lebanon and Yemen, children under five years represent 26% and 24% of the total suspected cases respectively. This

indicates the need for further investigations to understand other possible pathogens that may cause diarrhea among children under five years of age and to strengthen the

surveillance and laboratory systems in the Region.

There are many drivers contributing to the resurgence of cholera in the Region, including climate change, conflict and political instability, weak health systems, increased

population movement, poor water and sanitation infrastructure and low awareness among the public. With the support of WHO and other partners, all cholera-affected countries

implemented multisectoral cholera response interventions, including coordination, water and sanitation, early warning surveillance, laboratory diagnosis, clinical management,

Considering that many countries in the Region are facing natural disasters, political and economic instability, and armed conflicts, it's critical to enhance the preparedness and

response capacities for AWD/cholera for the next season. Therefore, the high-risk countries - with WHO support- need to work on strengthening coordination, building the HCWs

 $capacities \ for \ detection, \ diagnosis, \ and \ management \ and \ prevention \ of \ AWD/cholera \ outbreaks, \ in \ addition \ to \ prepositioning \ of \ the \ required \ health \ supplies. Furthermore, \ and \ required \ health \ supplies \ for \ detection, \ diagnosis, \ and \ management \ and \ prevention \ of \ AWD/cholera \ outbreaks, \ in \ addition \ to \ prepositioning \ of \ the \ required \ health \ supplies.$ 

enhancing and continuing the response activities for the ongoing AWD/cholera outbreaks in the Region is essential.
