

Highlights, November [Cholera in Yemen, monthly situation update, November 2016](#)

As of 30 November 2016, a cumulative number of 7730 acute watery diarrhoea/cholera cases, including 82 related deaths (attack-rate 3.4%, case-fatality rate 1.1%) were reported from 135 districts.

In November, 5489 new acute watery diarrhoea/cholera cases, including 35 associated deaths were reported.

Of the 613 stool samples collected since the outbreak, 51 tested positive for *V. cholerae* in November.

To date, 35% of all recorded acute watery diarrhoea/cholera cases affected children under 5 years of age.

As shown in the EPI curve, the trend of acute watery diarrhoea/cholera cases has gradually increased from EPI week 45 to 47.

Three additional districts reported cases during this period, namely, Abyan, Dhamar and Raymah. Over 70% of all acute watery diarrhoea/cholera cases have been reported in Al-Hudaydah, Aden, Ta'izz, Al Bayda and Al Dhale'a governorates.
