2010 animal review of the Bullepinic list of priority diseases.

2018 annual review of the Blueprint list of priority diseases

List of Blueprint priority diseases

For the purposes of the R&D Blueprint, WHO has developed a special tool for determining which diseases and pathogens to prioritize for research and development in public health emergency contexts. This tool seeks to identify those diseases that pose a public health risk because of their epidemic potential and for which there are no, or insufficient, countermeasures. The diseases identified through this process are the focus of the work of R&D Blueprint. This is not an exhaustive list, nor does it indicate the most likely causes of the next epidemic.

was released in December 2015 first list of prioritized diseases The

. January 2017 , the list was first reviewed in \Box prioritization methodology Using a published \Box
