

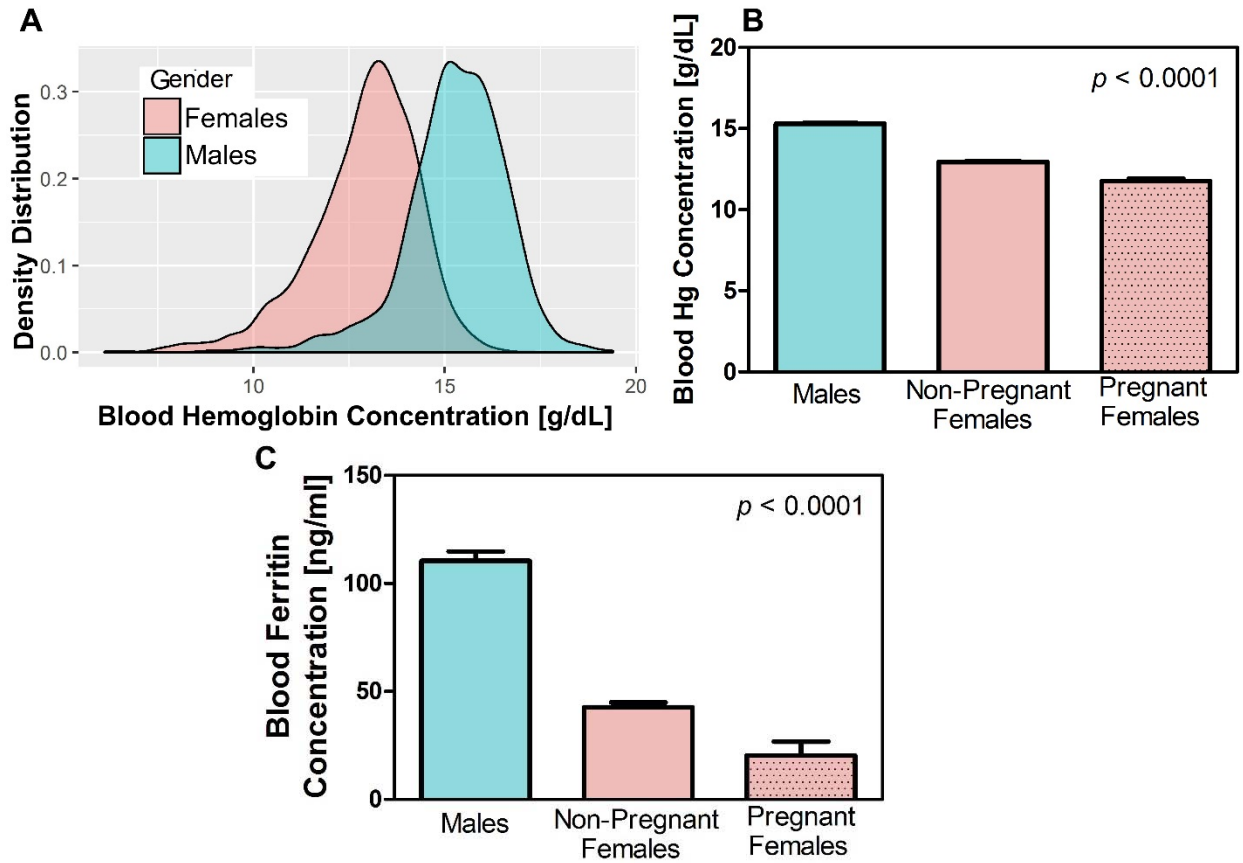

Figure 2. Haemoglobin and ferritin concentrations by sex

Panel A shows the density distribution of blood haemoglobin concentrations for males and females. Panel B shows means and standard error of means for haemoglobin levels in males, non-pregnant females and pregnant females. *P* values shows ANOVA results for significant differences among the groups. Panel C shows means and standard error of means for ferritin levels in males, non-pregnant females and pregnant females. *P* values shows ANOVA results for significant differences among the groups.
