

**Table 2: Adjusted odds ratios for significant variables using stepwise multivariate logistic regression**

<b>Significant risk factors for each sex</b>	<b>Odds Ratio (95% CI)</b>
<b>Males</b>	
<b>Age</b>	
18-29	0.08 (0.03-0.25)
30-39	0.02 (0.00-0.12)
40-49	0.05 (0.02-0.13)
50-59	0.11 (0.05-0.25)
60-69	0.28 (0.13-0.60)
> =70	1
<b>Region*</b>	
Northern	1.43 (0.71-2.90)
Central	0.56 (0.26-1.21)
Southern	1
<b>Females</b>	
<b>Age</b>	
18-29	1.40 (0.70-2.79)
30-39	1.30 (0.67-2.54)
40-49	2.05 (1.07-3.93)
50-59	0.94 (0.49-1.80)
60-69	0.87 (0.44-1.73)
> =70	1
<b>Region*</b>	
Northern	1.36 (1.05-1.77)
Central	0.87 (0.67-1.13)
Southern	1
<b>Marital status</b>	
Married	1.60 (1.15-2.22)
Other*	2.05 (1.32-3.18)
Single	1
<b>Education</b>	
Illiterate	0.86 (0.55-1.35)
Primary	0.70 (0.54-0.90)
Higher	0.67 (0.54-0.85)
Secondary	1

\*Others included divorced, separated, and widowed were combined due to low numbers.
