

**Table 2 Tuberculosis (TB) infection for those with and without a BCG scar. The table gives the proportion of those that had positive reactions, of these the proportion that were due to TB, the prevalence of TB infection, the mean age of each group and the corresponding annual risk of infection**

<b>BCG scar</b>	<b>Proportion of positive reactors</b>	<b>Proportion due to TB (95% CI)</b>	<b>Prevalence of TB (95% CI) %</b>	<b>Mean age (years)</b>	<b>Annual risk of infection (95% CI) %</b>
No	0.67	0.33 (0.32–0.34)	0.22 (0.21–0.23)	9.0	2.7 (2.5–2.9)
Yes	0.61	0.28 (0.26–0.30)	0.17 (0.16–0.18)	9.4	2.0 (1.9–
