

**Table 1 Specificity, sensitivity, and positive predictive values for estimation of fetal weight using ultrasound, clinical and maternal estimations**

Method of estimation	Normal weight children <sup>a</sup>		Abnormal weight children		Sensitivity	Specificity	Positive predictive value
	Correctly estimated	Incorrectly estimated	Correctly estimated	Incorrectly estimated			
	No.	No.	No.	No.			
Ultrasound	211	18	3	14	17.6	93.5	14.3
Clinical	228	1	2	15	11.8	99.6	67.0
Maternal	200	4	1	15	6.3	98.0	20.0

<sup>a</sup>Normal birth weight was considered as 2500–4000 g.
