

Table 2 Sensitivity and specificity for estimation of fetal weight using ultrasound, clinical and maternal estimates based on the maximal point of receiver operating characteristic (ROC) curves

Method of estimation	Cut-off point for weight (g)	Maximum specificity	Maximum sensitivity	ROC area
		%	%	
Ultrasound	3625	62.5	81.7	0.76
Clinical	3500	75.0	76.1	0.84
Maternal	3400	62.5	69.5	0.75
