

Table 3 Logistic regression analysis of gestational diabetes mellitus with maternal age, parity and history of abortion

Independent variable	β	SE	P-value	OR	95% CI
Maternal age	0.0124	0.025	< 0.001	1.13	1.08-1.19
Abortion (+ve history = 1)	0.341	0.253	0.18	1.41	0.86-2.31
Parity (nulliparous = 1)	1.083	0.540	0.045	2.95	1.03-8.51
Constant	-6.288	0.905	< 0.001	0.002	

SE = standard error; OR = odds ratio; CI = confidence interval.
