

Table 4 Regression analysis for variables predicting outcome of mental illness<sup>a</sup>

Variable	Unstandardized coefficient		Standardized coefficient Beta
	B	SE	
Sex	4.80	2.88	0.05
Diagnosis	0.24	0.83	0.00
Age at onset of psychiatric symptoms	-6.59	0.17	-0.00
Duration of untreated mental illness	-1.99	0.39	-0.15**
Marital status	-0.46	1.31	-0.1
Psychoeducation	43.5	2.87	0.48**
Diabetes mellitus	-0.10	0.04	-0.06*

<sup>a</sup> $P < 0.05$ ; \*\* $P < 0.01$ .<sup>a</sup>Outcome (dependent) variable = number of months after treatment that the patient relapsed.

SE = standard error.
