

Table 6 Multivariate analysis of the relationship between some variables and the risk of aggression and criminal behaviour among adolescents (Alexandria 2012)

Independent variable	Standardized coefficient (beta)	t-value	P-value
Behavioural changes in family member	0.211	5.43	< 0.001
Sex of the adolescent	0.217	6.51	< 0.001
Verbal violence against brothers/sisters	0.137	3.95	< 0.001
Substance abuse by family member	0.098	2.84	0.005
Physical violence against spouse	0.090	2.37	0.018

Dependent variable was total risk score of the adolescent.
