

**Table 6 Results of latent transition analysis model with 3 statuses: probabilities of transition between statuses at time 1 (at baseline) and time 2 (after 12 months)**

Latent status at time 1	Latent status at time 2		
	Never smoker	Experimenter	Regular smoker
Never smoker	<b>0.882</b>	0.101	0.017
Experimenter	0.000	<b>0.830</b>	0.170
Regular smoker	0.000	0.000	<b>1.000</b>

*Bold font indicates higher conditional probability values.*
