

Table 5 Regression analysis for variables that predict drug use among medical students in Lebanon ($n = 182$)

Variable	B	SE	95% CI		<i>P</i>
			Lower bound	Upper bound	
Constant	0.319	0.60	-0.78	1.50	0.599
Sex	-0.086	0.19	-0.46	0.30	0.657
Knowledge	-0.020	0.02	-0.05	0.01	0.201
Intrinsic religiosity	-0.001	0.03	-0.05	0.05	0.980
Alcohol use	0.149	0.03	0.08	0.21	0.002
Interest in working in the field	0.004	0.07	-0.13	0.14	0.947
Patient motivation is prerequisite for intervention	0.076	0.07	-0.06	0.21	0.255
DUKE-AD score	0.041	0.03	-0.014	0.093	0.154

Adjusted $R^2 = 0.44$.

SE = standard error.

CI = confidence interval.

DUKE-AD = Duke Anxiety Depression Scale.
