Figure 1: Sociobehavioural model of health service use (Andersen's Behavioural Model 1968)

**Predisposing factors**

- **Sociodemographic variables**
  - Age
  - Education
  - Family size
  - Place of residence

- **Health Beliefs**

**Enabling factor**

- **Financial**
  - Individual level (income, wealth including the health insurance at an individual disposal to pay for health services)
  - Contextual level (resources available, rate of health insurance coverage and health care expenditure)

- **Organizational**
  - Individual (means of access, transportation, travel time to and waiting time for health services)
  - Contextual (amount varieties, structure, distribution of health services facilities, health policies, and availability of personnel)

**Need factors**

- **Perceived**
  (how women and caregivers view the need for caesarean birth)

- **Evaluated**
  (professional assessment and need for medical care)

**Use of health services (CB)**
