

**Table 2** Distribution of microbial aetiology of the cases of suspected meningitis (n = 197), Halabja, 2023

| Microorganism                         | %    |
|---------------------------------------|------|
| <b>Bacteria</b>                       |      |
| <i>Escherichia coli</i> K1            | 0.0  |
| <i>Streptococcus pneumonia</i>        | 1.5  |
| <i>Streptococcus agalactiae</i>       | 0.0  |
| <i>Neisseria meningitides</i>         | 0.0  |
| <i>Haemophilus influenza</i>          | 0.0  |
| <i>Listeria monocytogenes</i>         | 0.0  |
| <b>Viruses</b>                        |      |
| Cytomegalovirus                       | 0.0  |
| Enterovirus                           | 98.5 |
| Herpes simplex virus 1                | 0.0  |
| Herpes simplex virus 2                | 0.0  |
| Human herpesvirus 6                   | 0.0  |
| Human parechovirus                    | 0.0  |
| Varicella zoster virus                | 0.0  |
| <b>Yeasts</b>                         |      |
| <i>Cryptococcus neoformans/gattii</i> | 0.0  |
