

**Table 2 Clinical manifestations of patients exposed to snakebite, Saudi Arabia, January 2000 to December 2021**

| <b>Clinical manifestation</b>                                | <b>Frequency<br/>n (%)</b> |
|--|----------------------------|
| <b>Local manifestations</b>                                  | 67 (97.0)                  |
| Mild local (pain, local oedema, fang marks)                  | 37 (53.6)                  |
| Moderate (necrosis, bleeding, extended oedema)               | 16 (23.2)                  |
| Severe (suspected compartment syndrome)                      | 14 (20.3)                  |
| None   | 2 (3.0)                    |
| <b>Central nervous system, total</b>                         | 13 (18.8)                  |
| Difficulty breathing   | 4 (5.8)                    |
| Diplopia   | 2 (2.9)                    |
| Ptosis   | 1 (1.4)                    |
| Respiratory failure  | 5 (7.2)                    |
| Altered consciousness  | 9 (13.0)                   |
| Associated with coagulopathy                                 | 6 (8.7)                    |
| <b>Chest pain</b>  | 1 (1.4)                    |
| <b>Heart rate Median 93 (range 79–113)</b>                   |                            |
| <b>Heart rate category</b>                                   |                            |
| Bradycardic  | 4 (5.8)                    |
| Normal range   | 47 (68.1)                  |
| Tachycardic  | 18 (26.1)                  |
| <b>Systolic blood pressure, median 121.5 (range 114–130)</b> |                            |
| <b>Diastolic blood pressure, median 72.5 (range 67–79.5)</b> |                            |
| <b>Respiratory rate, median 20 (range 20–24)</b>             |                            |
| <b>Coagulopathy</b>  | 31 (44.9)                  |
| <b>Bleeding</b>  | 6 (8.7)                    |
