

**Table 2** Awareness of main transmission routes and most important risk factor for methicillin-resistant *Staphylococcus aureus* (MRSA) infection in different units

Unit	Correct MRSA transmission route <sup>a</sup>		Most important risk factor for MRSA infection <sup>b</sup>	
	No.	% correct	No.	% correct
General intensive care unit	56	62.2	18	20.0
Coronary care unit	13	56.5	4	17.4
Neonatal and paediatric intensive care units	18	64.3	8	28.6
Anesthesiology	7	35.0	3	15.0
Cordiothoracic surgery	10	66.7	6	40.0
Internal medicine chest	9	31.0	4	13.8
P-value	< 0.05		> 0.05	

<sup>a</sup>Correct answer: airborne droplets, contaminated surfaces, and skin contact; <sup>b</sup>Correct answer: open skin wounds.
