Table 3 Risk factors for default from tuberculosis treatment in the final model of the multivariate conditional logistic regression

| Risk factor | OR (95\% CI) | P-value |
| :--- | :---: | :---: |
| Relapsed case | $4.49(1.87-10.8)$ | $<0.001$ |
| Current smoker | $2.10(1.07-4.14)$ | 0.03 |
| Alcohol user | $2.92(1.04-8.19)$ | 0.04 |
| $>30$ min. to treatment centre | $3.34(1.06-10.5)$ | 0.04 |
| Received insufficient explanation about <br> disease | $2.87(1.53-5.36)$ | $<0.001$ |

$\mathrm{OR}=$ odds ratio; $\mathrm{Cl}=$ confidence interval.
