

### Highlights

Epidemiological week no. 45  
(3 to 9 Nov 2013)

- Dengue fever:** During this week, 846 Dengue fever cases have been reported. The highest number of DF cases 440 reported from Punjab. The outbreaks are being responded jointly.
- CCHF:** No new confirmed CCHF case was reported in week 45, 2013. (Page 5).
- In this week, **72** districts and 2,020 health facilities have reported to Disease Early Warning system (DEWS), compared to 69 districts with 1,961 health facilities shared weekly data in week 44, 2013 to the DEWS.
- Total **655,113** patients consultations reported this week compared to **70,241** consultations in week 44, 2013.
- 78** alerts investigated and **6** outbreaks identified and timely responded. Altogether 25 alerts were for Measles; 13 for NNT; 12 for Dengue fever; 6 each for Leishmaniasis and Typhoid fever; 5 for ARI; 2 each for AJS, Bloody diarrhoea, CCHF, Diphtheria; while 1 each for Acute diarrhoea, Acute watery diarrhoea and Pertussis.

Figure-1: 72 districts reported to DEWS in week 45, 2013

Priority diseases under surveillance in DEWS

Pneumonia  
Acute Watery Diarrhoea  
Bloody Diarrhoea  
Acute Diarrhoea  
Suspected Enteric/Typhoid Fever  
Suspected Malaria  
Suspected Meningitis  
Suspected Dengue fever  
Suspected Viral Hemorrhagic Fever  
Suspected Measles  
Suspected Diphtheria  
Suspected Pertussis  
Suspected Acute Viral Hepatitis  
Neonatal Tetanus  
Acute Flaccid Paralysis  
Scabies  
Cutaneous Leishmaniasis

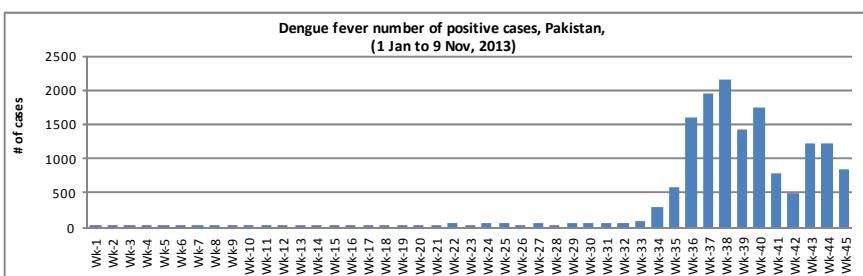

Cumulative number of selected health events reported in Epi-week 1 to 44, 2013 (29 Dec 2012 to 9 November 2013)

Disease	# of Cases	Percentage
ARI	7,151,568	20%
Bloody diarrhoea	90,896	<0.5%
Acute diarrhoea	2,744,255	8%
S. Malaria	1,585,130	4%
Skin Diseases	1,399,763	4%
Unexplained fever	1,114,201	3%
<b>Total (All consultations)</b>	<b>36,180,831</b>	

Major health events reported during the Epi-week - 44 (3 - 9 Nov 2013)

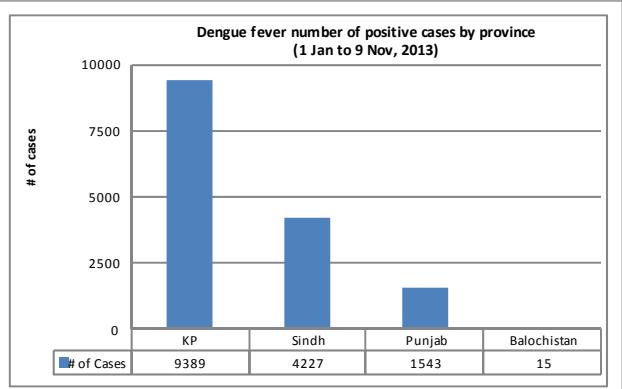

Disease	# of Cases	Percentage
ARI	145,674	22%
Bloody diarrhoea	1,149	<0.5%
Acute diarrhoea	37,731	6%
S. Malaria	28,716	4%
Skin Diseases	22,812	3%
Unexplained fever	19,863	3%
<b>Total (All consultations)</b>	<b>655,113</b>	

Figure-2: Number of Dengue fever positive cases in Pakistan, 1 Jan to 9 Nov 2013

In 2013 Dengue fever cases are reported from the less endemic areas also. A huge outbreak is confronted in district Swat and increasing number of Dengue fever cases are reported from adjacent districts also. Dengue fever cases are also reported from Gawadar district in Balochistan province, districts Karachi and Hyderabad in Sindh province and districts Lahore and Rawalpindi in Punjab province.

From 1st January to 9th November 2013, Khyber Pakhtunkhwa reported 9,389; Sindh 4,227, Punjab 1,543, and Balochistan 15 confirmed Dengue fever cases.

## Outbreaks (Wk-45/2013):

Date	Disease	Province	District	Area	<5M	>5M	<5F	>5F	Action Taken
3-Nov	DF	Punjab	Lahore	Aziz Bhatti Town UC 43, UC 44, UC 45, UC 48, UC 57, UC 58	0	26	0	16	16 confirmed, 25 suspected and 1 probable case of Dengue fever notified from Teaching Hospitals in Lahore. 16 blood samples were taken and sent to lab for detection of dengue specific antibodies, result for IgM positive for all cases. PCR request was sent for 3 cases to IPH for serotyping and genotyping result is awaited. The confirmed cases were admitted and kept in isolation ward (HDU) of Teaching hospital. Outbreak warning was generated by PITB DSS team after analysis of data by Dengue monitoring cell. There is no travel History of patient. DPC along with, CDCO, DDHO, and entomologist visit the area, Vector Surveillance was carried out at confirmed case Location. Health Education session conducted in the community Proper solid waste disposal and improved water storage practices use of screening, protective clothing and repellents Community - based environmental management and health education campaign for improved water storage practices to remove mosquito breeding sites, follow up planned. Information shared with ADG(VBD) and EDO Health Lahore.
7-Nov	DF	Punjab	Lahore	Ravi Town UC 7, UC 9, UC 12, UC 14, UC 26	0	23	0	12	13 confirmed, 17 suspected and 5 probable cases of Dengue fever notified from Teaching Hospitals of Lahore. The cases were investigated and blood sample was taken and sent to lab for detection of dengue specific antibodies, result for IgM positive for 13 cases. The confirmed case was admitted and kept in isolation ward (HDU) of Teaching hospital. Health education session conducted in the community on Proper solid waste disposal and improved water storage practices use of screening, protective clothing and repellents Community - based environmental management and health education campaign for improved water storage practices to remove mosquito breeding sites. Follow up planned. ADG(VBD) and EDOH informed.
8-Nov	DF	Punjab	Lahore	Wahga Town UC 40, UC 42	0	9	0	4	6 confirmed, 7 suspected cases of Dengue fever notified from different teaching hospitals in Lahore. 6 blood samples were taken found positive. PCR request was sent for one case to IPH for serotyping and Genotyping result is awaited. The confirmed cases were admitted and kept in isolation ward (HDU) of Teaching hospital. UC wise outbreak warning was generated by PITB DSS Team after analysis of data by Dengue monitoring cell. There is no travel History of patient. Health education session conducted in the community on proper solid waste disposal and improved water storage practices, protective clothing and repellents Community - based environmental management. ADG(VBD) and EDOH were informed.
4-Nov	DF	Punjab	Lahore	Data Ganj Bakhsh Town UC 70 Ganj Kalan	0	2	0	2	1 confirmed case of Dengue Hemorrhagic fever notified from HDU Services Hospital, 2 confirmed cases of Dengue fever notified by Mayo Hospital, while 1 death due to Dengue fever was notified by Services Hospital Lahore. 3 blood samples were taken and found positive Dengue fever. PCR request of patients were sent to PU for serotyping and genotyping result is awaited. The confirmed cases were admitted and kept in isolation ward (HDU) of Teaching hospital. Alert warning was generated by PITB DSS team after analysis of data by Dengue monitoring cell. There is no travel History of patient. DPC along with, CDCO, DDHO, and entomologist visit the area, Vector Surveillance was carried out at confirmed case Location. Health education session conducted in the community on proper solid waste disposal and improved water storage practices, protective clothing and repellents and community - based environmental management. ADG(VBD) and EDOH was informed.
8-Nov	Diphtheria	Punjab	Lahore	Babu Sabu Colony UC 90 Saman abad Town	0	0	0	1	One probable Diphtheria case reported from Children Hospital Lahore. ADS was supplied by WHO. There is no travelling history of patient. One sample was collected and send to NIH for lab testing. All close contacts at paternal address were examined and advised Syp. Erythrosine. During field investigation BCG given to 12 children, Penta 1 to 40 children, Penta 2 to 2 Children, Penta 3 to 4 Children, 20 children under 5 year of age were given additional doze of Penta. DSC shared the detail Investigation report to EDO(H) Lahore.
8-Nov	DF	Sindh	Karachi	Tall wali Gali, near Moeeni Masjid, Hazara Colony	0	5	0	1	6 Dengue fever cases including 2 deaths (1 male age 23 years and 1 female age 25 years) were reported by Dengue Cell Sindh, IgG and IgM tests both were found positive. During field investigation a health education session conducted with the family members. Information shared with THMT and EDO Karachi.

Figure-3: Number of alerts received and responded, week 43 - 45, 2013

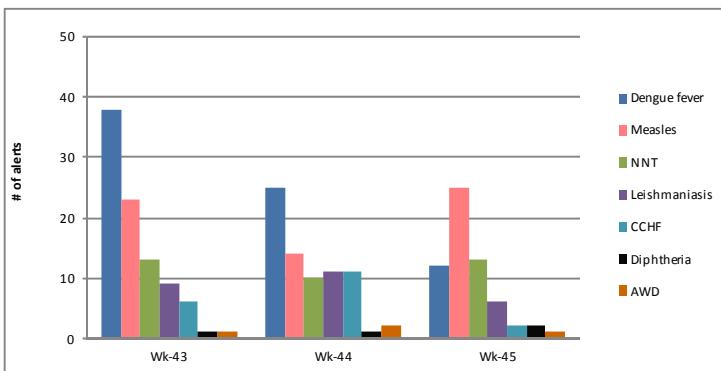

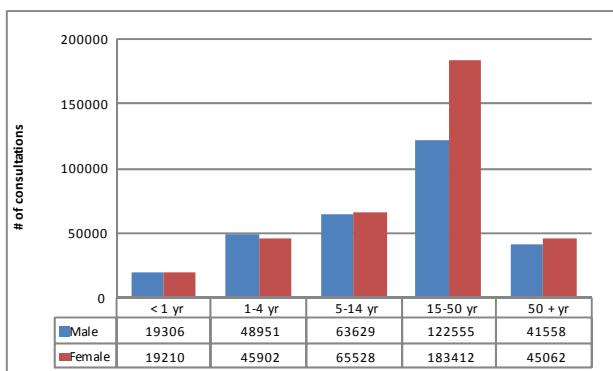

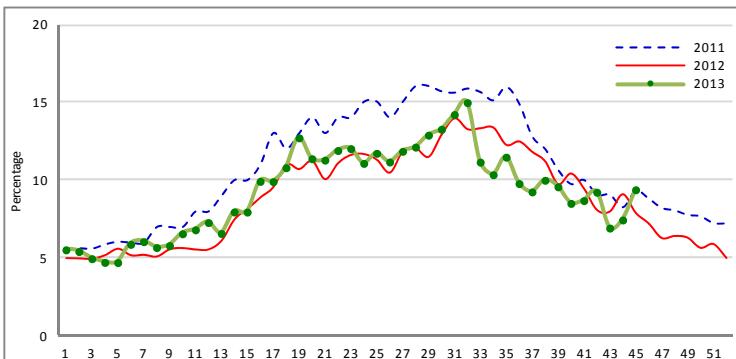

Figure-4: Number of consultations by age and gender, week 45, 2013

### Province Khyber Pakhtunkhwa:

Figure-5: Weekly trend of Acute diarrhoea, province Khyber Pakhtunkhwa

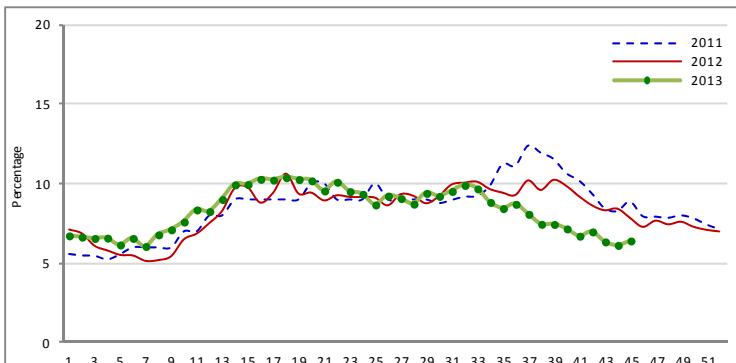

209 health facilities from 12 districts of Khyber Pakhtunkhwa sent reports to DEWS with a total of 47,111 patients consultations reported in week 45, 2013. A total of 19 alerts, 16 for Measles; while 1 each for CCHF, Diphtheria and dengue fever were received and appropriate measures were taken.

The weekly trend of Acute diarrhoea is showing increase as compared with last week in KP, and 5 Cholera confirmed cases reported from KP in last six weeks, and the situation need continuous attention in the province.

### Province Sindh:

Figure-6: Weekly trend of Acute diarrhoea, province Sindh

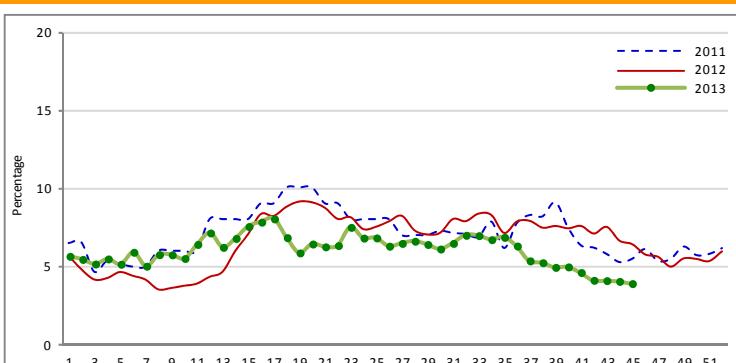

811 health facilities from 23 districts in Sindh province reported to DEWS with a total of 246,031 patient consultations in week 45, 2013. A total of 17 alerts, 10 for NNT; 4 for dengue fever; while 3 for Leishmaniasis were received and appropriate measures were taken.

The overall proportion of AD for the province is showing increase as compared with last week, but during this season, 18 AWD outbreaks identified and responded, and the situation need continuous attention in the province.

### Province Punjab:

Figure-7: Trend of Acute diarrhoea, province Punjab

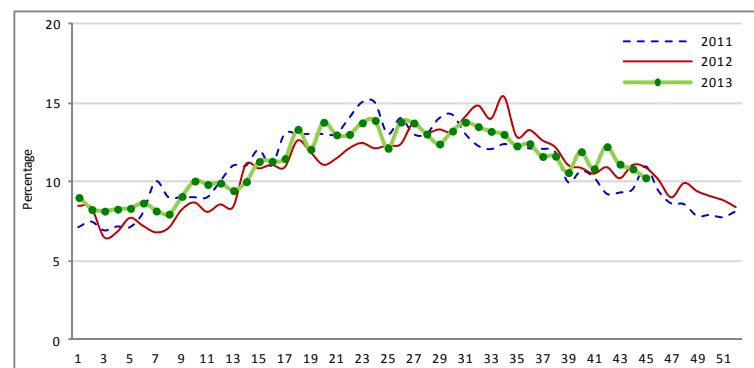

619 health facilities from 13 districts in province Punjab reported to DEWS with a total of 303,953 patients consultations in week 45, 2013.

Total 25 alerts were received and appropriate measures were taken. Altogether 6 were for Dengue fever; 5 each for Typhoid fever and ARI; 2 for AJS; while 1 each for Diphtheria, Acute diarrhoea, Acute Watery diarrhoea, Bloody diarrhoea, CCHF, Measles and NNT were responded in Punjab.

The weekly trend of AD in Punjab showing decrease as compared with last week, but required vigilant monitoring of the situation.

**Province Balochistan:**

Figure-8: Weekly trend of Acute diarrhoea, province Balochistan

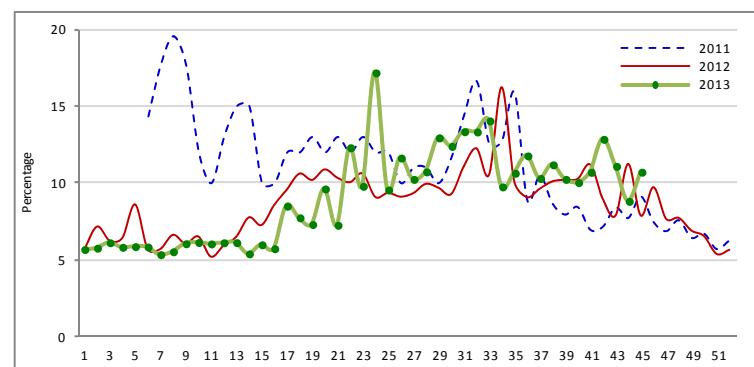

280 health facilities from 13 districts in province Balochistan reported to DEWS with a total of 40,321 patients consultations in week 45, 2013. 8 alerts were reported and appropriate measures were taken. Altogether 3 alerts were for Measles; while 1 each for Bloody diarrhoea, Dengue fever, Leishmaniasis, Pertussis and Typhoid fever.

In this week the weekly proportion of AD showing decrease as compared with last week, but vigilant monitoring of the situation is required.

**FATA:**

Figure-9: Weekly trend of Acute diarrhoea, FATA

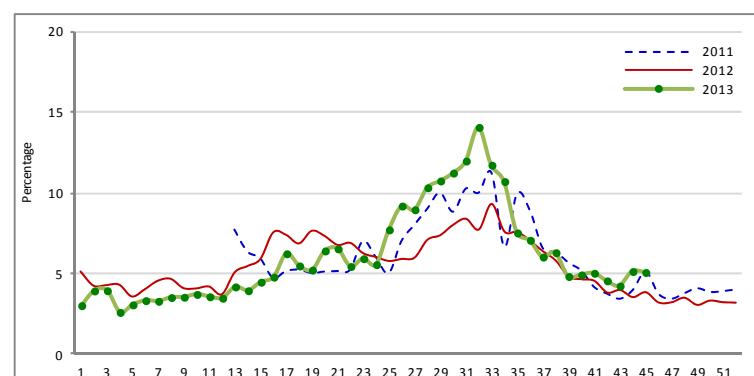

37 health facilities from 3 agencies in FATA reported to DEWS with a total of 10,395 patients consultations in week 45, 2013.

8 alerts, 4 for Measles; while 2 each for Leishmaniasis and NNT were reported in week 45, 2013 and appropriate measures were taken.

Fluctuating and high weekly trend of Acute diarrhoea is noted in FATA and required vigilant monitoring.

**State of Azad Jammu and Kashmir:**

Figure-10: Weekly trend of Acute diarrhoea, AJ&amp;K

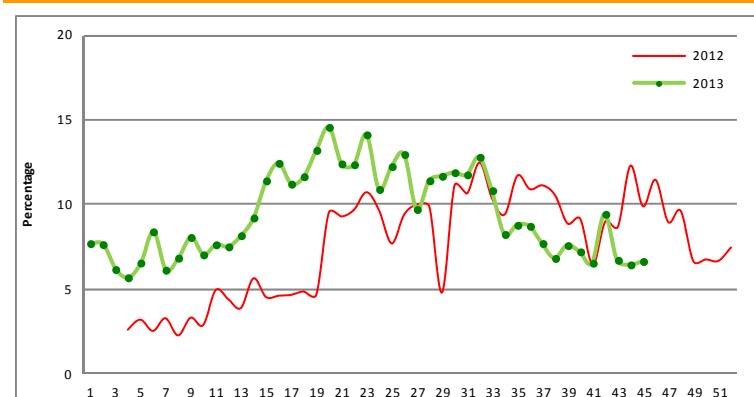

61 health facilities from 7 districts in AJ&K reported to DEWS with a total of 6,775 patients consultations in week 45, 2013.

No alerts for any disease were reported from any area in AJ&K in week 45, 2013.

Weekly trend of Acute diarrhoea showing minor decrease as compared with last week, and vigilant monitoring of the situation is required.

**Islamabad:**

Figure-11: Weekly trend of Acute diarrhoea, Islamabad

3 health facilities reported to DEWS on time with a total of 527 patients consultations in week 45, 2013.

1 alert for Measles was received and appropriate measures were taken in week 45, 2013.

Weekly trend of Acute diarrhoea showing minor increase as compared with last week, and vigilant monitoring of the situation is required.

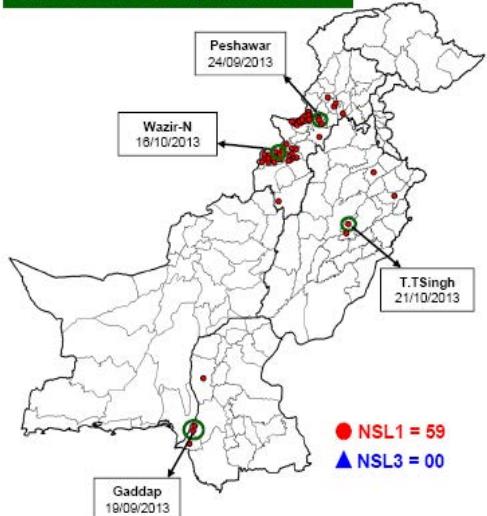

**Table-1: Number of alerts and outbreaks reported and investigated with appropriate response**

Disease	2012		Current week 45, 2013		2013 (Total up till week - 45)	
	A	O	A	O	A	O
Acute watery diarrhoea	656	193	1	0	130	40
Acute jaundice syndrome	113	22	2	0	46	6
Bloody diarrhoea	146	11	2	0	42	2
CCHF	68	41	2	0	85	46
Dengue fever	175	29	12	5	234	51
Diphtheria	60	16	2	1	65	19
Measles	5922	812	25	0	3177	273
Pertussis	366	147	1	0	45	10
NNT + tetanus	560	0	13	0	294	0
Malaria	136	68	0	0	24	5
Cutaneous Leishmaniasis	900	78	6	0	556	49
Others	1529	58	14	2	447	5
Total	10631	1475	80	8	5145	506

**Distribution of Wild Polio Virus cases in Pakistan 2012 and 2013**

In this week 45 2013, 3 new wild polio cases (type-1) have been reported; 2 from Punjab (District Toba Tek Singh) and 1 from Federally Administered Tribal Areas (North Waziristan Agency). This brings the total number of wild polio cases to 59 in 2013 as compared to 56 in 2012 (point in time) from 17 districts/ towns / tribal agencies / areas compared to 28 (point in time) last year.

Province	2012			2013		
	P1	P3	P1+P3	P1	P3	P1+P3
Punjab	2	-	-	5	-	-
Sindh	4	-	-	4	-	-
Khyber Pakhtunkhwa	27	-	-	9	-	-
FATA	17	2	1	41	-	-
Balochistan	4	-	-	-	-	-
AJ&K	-	-	-	-	-	-
Gilgit-Baltistan	1	-	-	-	-	-
Islamabad	-	-	-	-	-	-
<b>Total</b>	<b>55</b>	<b>2</b>	<b>1</b>	<b>59</b>	<b>-</b>	<b>-</b>

**Districts/ Towns with Wild Polio cases = 17****Follow up of CCHF**

In week 45, 2013, no new CCHF case was reported from any area. So for total of 87 suspected, 58 confirmed CCHF cases and 18 deaths have been reported country wide in year 2013.

In 2012, a total of 62 suspected cases were reported throughout the country with 41 cases confirmed and in total 18 deaths; of which 13 deaths (CFR is 31.7%) are reported of the lab confirmed cases and 5 deaths are reported as suspected CCHF cases. 23 confirmed cases were reported from Balochistan; 7 from Sindh; 6 from Khyber Pakhtunkhwa and 5 from Punjab. Table on right illustrates situation of CCHF cases in 2012-13.

Approximately all the cases had contact history with animal trading/handling, tick bite, contact with patient, tannery worker, butcher/animals slaughtering, and fresh animal skin. There is ongoing trade of animals and animal skins with movement intra Pakistan and between neighboring countries (Afghanistan and Iran).

Province	Number of CCHF cases and deaths reported in year 2012 and 2013 up till 2 November.					
	Suspected	Lab confirmed	Deaths	2013		
				Suspected	Lab confirmed	Deaths
AJ&K	0	0	0	1	1	0
Balochistan	Afghanistan*	5	3	12	6	2
	Balochistan	33	18	4	53	33
ICT	-	-	-	4	4	1

Punjab	8	5	3	10	4	3
Sindh	7	7	3	2	2	1
<b>Total</b>	<b>62</b>	<b>41</b>	<b>18</b>	<b>87</b>	<b>58</b>	<b>18</b>

**Focus on Dengue fever:**

Dengue fever represents one of the most recent and emerging public health challenges with an ever-increasing incidence across the globe, way beyond its original impact area in the tropics. As estimated 2.5 billion people, are said to be at risk from this viral infection across the world. Dengue has emerged as a global problem after 1950's. Incidence of disease can be ascribed to a number of diverse factors related to hygiene, urban decay, environmental problems, changed living styles and physical factors. With a rapidly evolving epidemiology, the disease appears to have become more common in recent years and disturbing numbers of human mortalities have been reported.

The first confirmed outbreak of DF in Pakistan was in 1994 but the sudden rise in cases and annual epidemic trend occurred first in Karachi in November 2005. To assist with vector control, WHO entomologists studied the Aedes mosquito in Karachi during the 2005 outbreak and used the information to design Pakistan-specific control interventions. The worst ever epidemic of Dengue fever reported in Pakistan was in 2011, and reporting of cases started in August in Lahore – Punjab, with over 16,580 confirmed cases and 257 deaths reported from Lahore district and an additional 5000 cases and 60 deaths reported from the rest of the province.

In 2013 Dengue fever cases are reported from the less endemic areas also. A huge outbreak is confronted in district Swat and increasing number of Dengue fever cases are reported from adjacent district also and cases are also reported from Gawadar district in Balochistan province and Karachi in Sindh province. There is no vaccine available against dengue, and there are no specific medications to treat a dengue infection. This makes prevention the most important step, and prevention means avoiding mosquito bites if you live in or travel to an endemic area.

**Patient management at home:**

- If a person is having fever for more than 2 days with headache, retro-orbital pain, myalgia and arthralgia, it can be taken as a suspected dengue fever case and basic care should be started at home as follow
- Let the patient rest and reduce fever by sponging patient with tepid water. If the patient is shivering, stop sponging, and cover the patient with blanket. Give paracetamol every 4 hours only if the patient still has high fever  $>39^{\circ}\text{C}$ . **Do not give the patient Aspirin or Brufen or similar medicine.**
- If patient has any of the warning signs he/she should go to the hospital as soon as possible.

**Warning signs (WS):**

Following are the warning signs of the Dengue Hemorrhagic fever and require immediate referral to the hospital.

- Persistent vomiting, not drinking
- Severe abdominal pain, lethargy and restlessness
- Hematemesis, bleeding from gums and nose, excessive menstrual bleeding
- Hemoglobinuria, giddiness, pale, cold clammy hands and feet
- No/less urine for 4-6 hours

**Prevention:**

- The best way to reduce mosquitoes is to eliminate the places where the mosquito lays eggs, like water storage containers in and around the home, animal watering containers, flower planter dishes. Keep these containers empty or cover water storage barrels properly. Look for standing water indoors such as in vases with fresh flowers and clean at least once a week.
- The adult mosquitoes like to bite inside as well as around homes, during the day and at night when the lights are on. To protect yourself, wear long sleeves and pants, and use repellent on your skin while indoors or out.
- Use Mosquito coils, electric vapor mats during the day time. Curtains can also be treated with insecticides.
- Also, make sure window and door screens are secure and without holes. If available, use air-conditioning.
- If someone in your house is ill with dengue, take extra precautions to prevent mosquitoes from biting the patient and going on to bite other household members. Keep the dengue patient under the bed net.

## Alerts and outbreaks, week 45, 2013
