Screened Children 2022

516,188

84,864

Screened Children
(0 - 59 months) in Aug

Screened Children (Under 6 months)

GAM (WHZ) (6 - 59 months)

48%

Stunting (6 - 59 months)

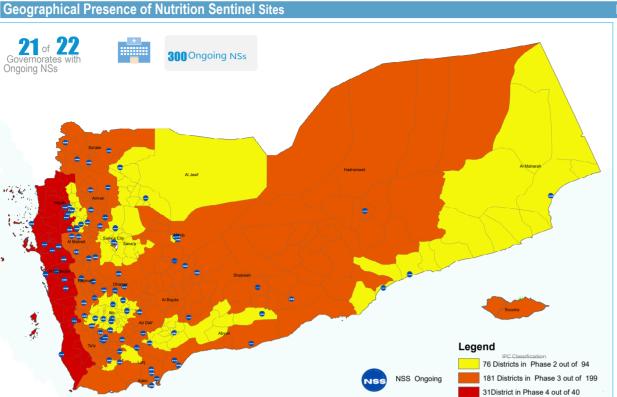

23% Anemia(6 - 59 months)

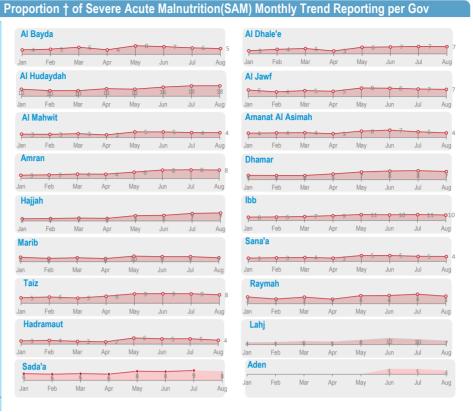

49%
Underwight
(0 - 59 months)

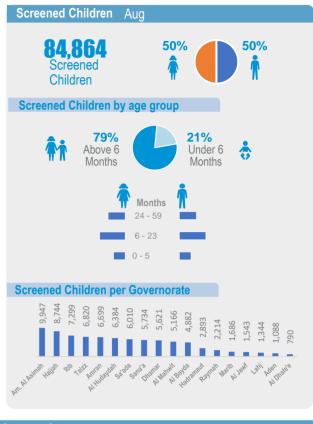

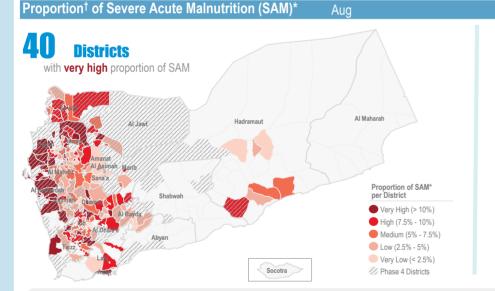

Exclusive Breastfeeding (0 - 6 months)

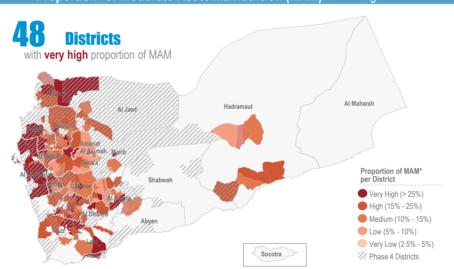

YEMEN: Nutrition Surveillance

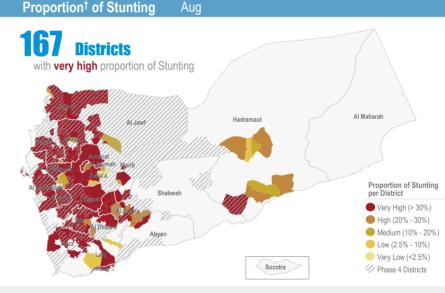

Proportion† of Moderate Acute Malnutrition (MAM)*

Objectives of the Yemen Nutrition Surveillance System

Monitor children nutritional status, early detection of malnutrition and case referral. Share information and trigger alert verification..

Methodology

Nutritional assessment in NSS is normally performed through the measurement of child's weigh, height/length, MUAC, age, hemoglobin level, breastfeeding status and oedema.

It is Facility-based surveillance system, established mainly in district hospitals across the country.

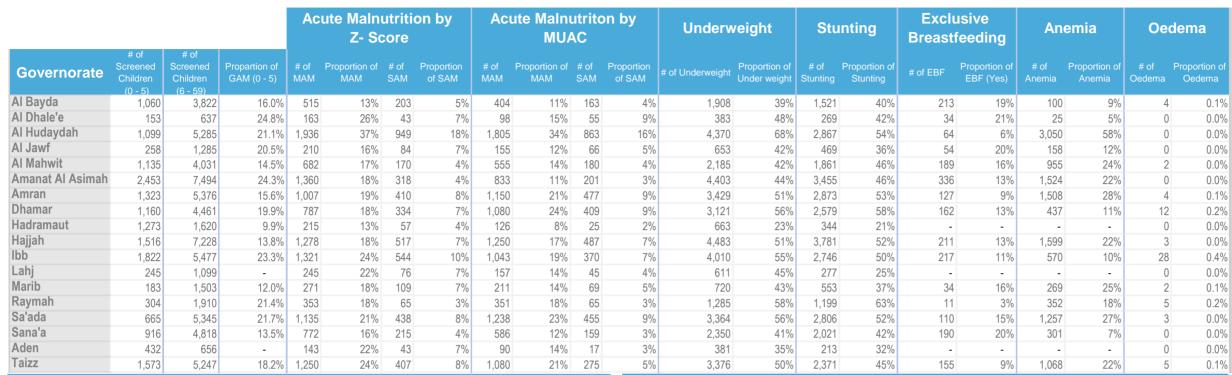

The system provides proportion of children under five years found suffering from any forms of malnutrition, out of the total children screened. It is not a formal survey using sampling methods to produce representative results.

The results only reflect the status of children who have attended the health facility in the month under review. The system tracks Global core nutrition indicators: Stunting, Wasting, Exclusive breastfeeding and Anemia. This bulletin is based on reports received by the health facility surveillance MoPHP teams*.

WHO supports the MoPHP and constantly works to expand coverage and improve data quality, funded by World Bank.

Summary for Nutrition Indicators Aug 2022 in Reporting Gov

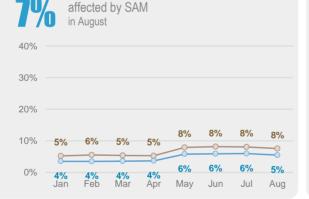

Proportion of Moderate Acute Malnutrition (MAM) < 125 mm and >= 115 mm

→ % Girls → % Boys

affected by MAM

Proportion of Severe Acute Malnutrition (SAM)

Acute Malnutrition by Weight/Height Z Score (WHZ) / Gender (Monthly Trend)

Chronic Malnutrition (Stunting) by Height/Age Z Score / Gender (Monthly Trend)

Proportion of Moderate Acute Malnutrition (MAM) < -2 z-score and >= -3 z-score

—— % Girls —— % Boys

n 1 affected by MAM

Proportion of Severe Acute Malnutrition (SAM)

< -3 z-score

affected by SAM

Underweight by Weight/Age Z Score / Gender (Monthly Trend)

Moderate < -2 z-score and >= -3 z-score

——— % Girls ——— % Boys

affected by moderate underweight

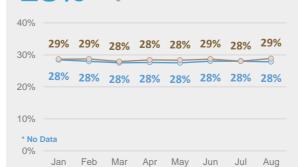

affected by severe underweight in August

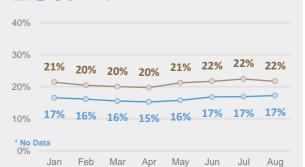

Moderate < -2 z-score and >= -3 z-score

—— % Girls —— % Boys **28%** affected by moderate stunting in August

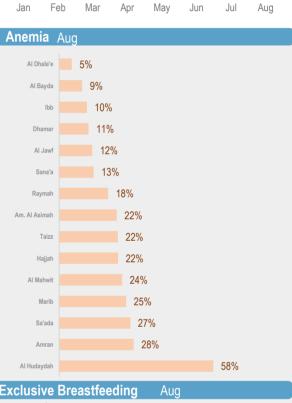

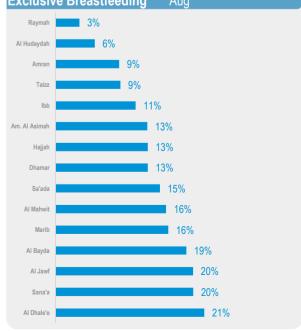

Severe < -3 z-score

affected by severe stunting

Proportion of Oedema per month
