Objectives of the Yemen Nutrition Surveillance System

Monitor children nutritional status, early detection of malnutrition and case referral. Share information and trigger alert verification..

Methodology

Nutritional assessment in NSS is normally performed through the measurement of child's weigh,height/length, MUAC, age,hemoglobin level, breastfeeding status and oedema.It is Facility-based surveillance system, established mainly in district hospitals across the country.

The system provides proportion of children under five years found suffering from any forms of malnutrition, out of the total children screened. It is not a formal survey using sampling methods to produce representative results.

The results only reflect the status of children who have attended the health facility in the month under review.The system tracks Global core nutrition indicators: Stunting, Wasting, Exclusive breastfeeding and Anemia.This bulletin is based on reports received by the health facility surveillance MoH teams*.

WHO supports the MoH and constantly works to expand coverage and improve data quality, funded by World Bank.

Additional screening of 12,236 children via mobile teams and pediatric wards integrated with TFC to ensure assessment of children in remote areas is conducted with ensuring to refer children with malnutrition forms to the nearest nutrition services to continue receiving treatment and follow up

Summary for Nutrition Indicators Feb 2025 in Reporting 21/22 Gov

wasting => 15% (very high)
underweight => 15% (very high)
Stunting => 30% (very high)

Proportion of Oedema per month

Anemia Feb

Acute Malnutrition by MUAC / Gender (Monthly Trend)

Proportion of Moderate Acute Malnutrition (MAM)
< 125 mm and >= 115 mm

— % Girls — % Boys

14% affected by MAM in February

Proportion of Severe Acute Malnutrition (SAM)
< 115 mm

4% affected by SAM in February

Acute Malnutrition by Weight/Height Z Score (WHZ) / Gender (Monthly Trend)

Proportion of Moderate Acute Malnutrition (MAM)
< -2 z-score and >= -3 z-score

— % Girls — % Boys

16% affected by MAM in February

Proportion of Severe Acute Malnutrition (SAM)
< -3 z-score

5% affected by SAM in February

Underweight by Weight/Age Z Score / Gender (Monthly Trend)

Moderate < -2 z-score and >= -3 z-score

— % Girls — % Boys

29% affected by moderate underweight in February

Severe < -3 z-score

15% affected by severe underweight in February

Chronic Malnutrition (Stunting) by Height/Age Z Score / Gender (Monthly Trend)

Moderate < -2 z-score and >= -3 z-score

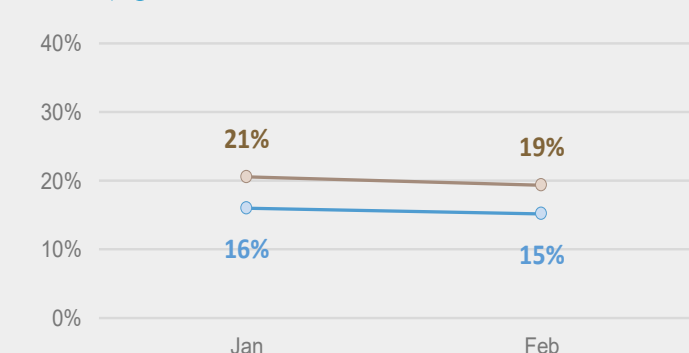

— % Girls — % Boys

28% affected by moderate stunting in February

Severe < -3 z-score

17% affected by severe stunting in February

Exclusive Breastfeeding Feb
