

Key Figures - From January to October 2022

Service Utilization January-October

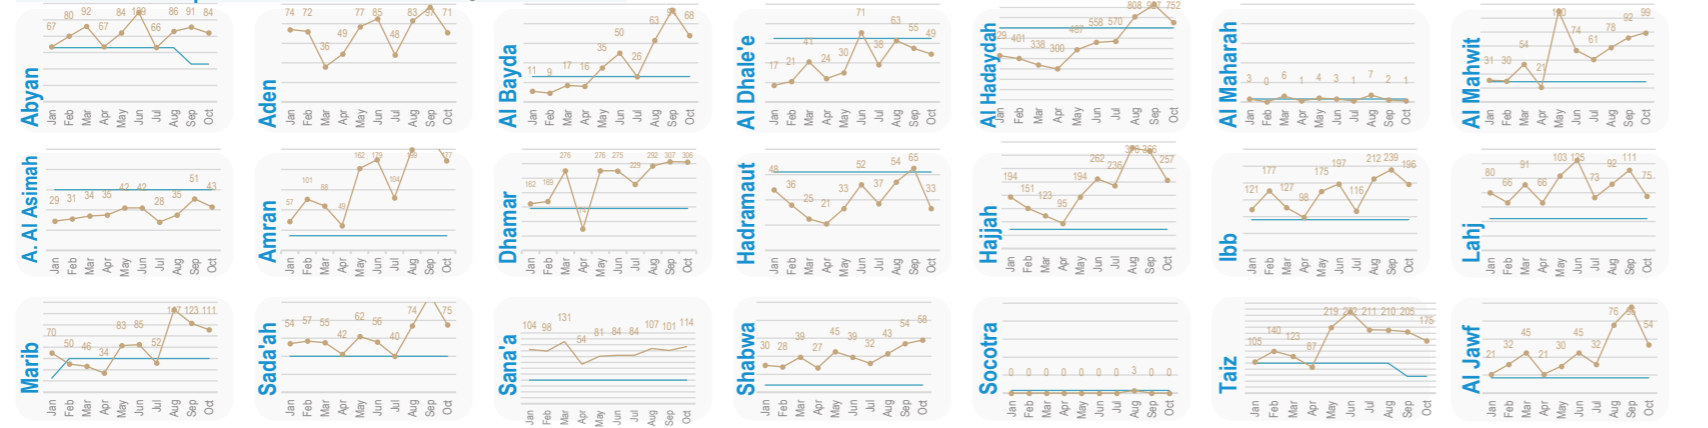

From January to October **23,414** children have received life-saving services in WHO-supported TFCs, of which **4,489 (19%)** are children under 6 months.

The quality of service is evidenced by the recovery (**95%**) and death (**1%**) rates. Each caregiver (**23,414**) in total, benefits from at least 5 counselling sessions per hospital stay on IYCF best practices. This might contribute to the observed decrease in relapse rate (**2%**) in October.

By ensuring the care for most critical cases in pediatric wards in referral hospitals with TFCs, (**21,136**) children were admitted from Jan - Oct 2022 in these referral hospitals for intensive care.
