

Key Figures - From January to July

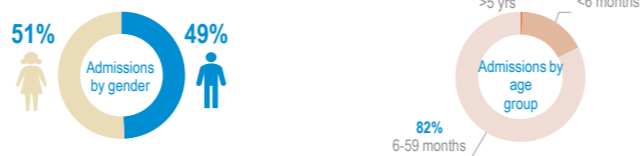

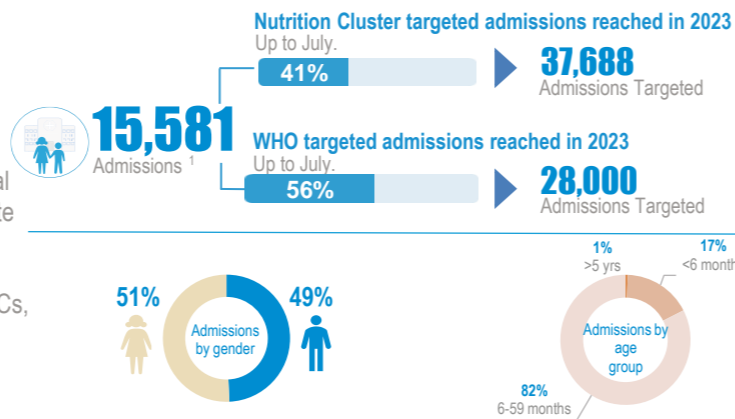

Service Utilization January-July

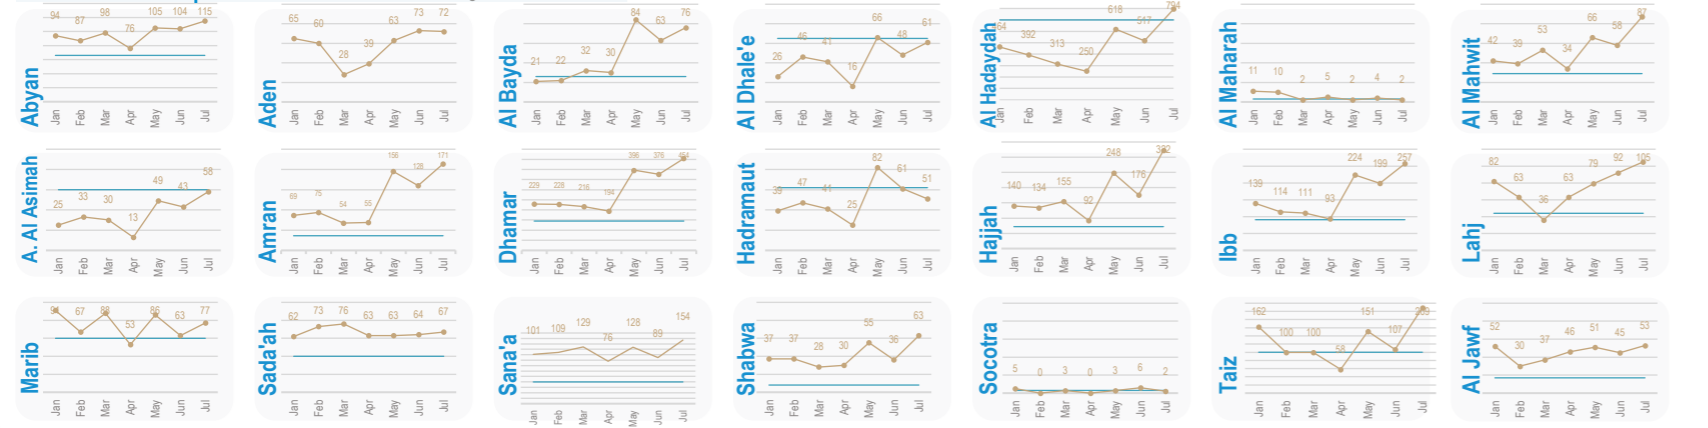

From January to July 15,581 children have received life-saving services in WHO-supported TFCs, of which 2,637 (17%) are children under 6 months.

The quality of service is evidenced by the recovery (94%) and death (1%) rates. Each caregiver (15,581) in total, benefits from at least 5 counselling sessions per hospital stay on IYCF best practices. This might contribute to the observed decrease in relapse rate (2%) in July.

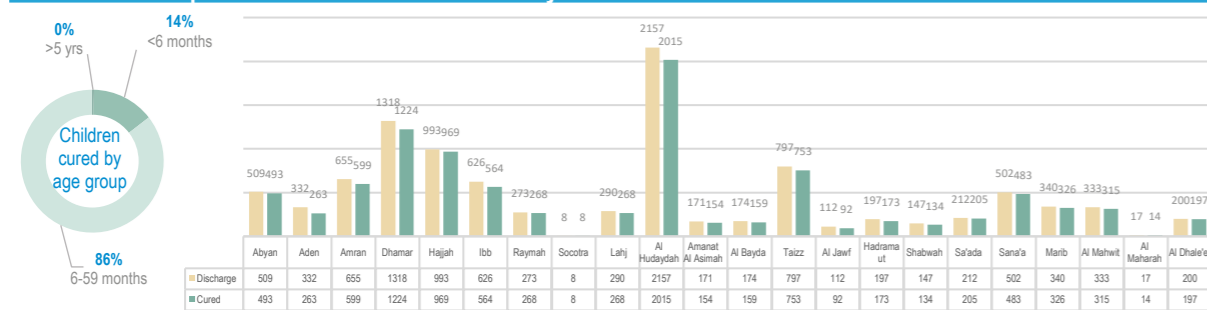

By ensuring the care for most critical cases in pediatric wards in referral hospitals with TFCs, 29,073 children were admitted in October in these referral hospitals for intensive care.
