

## Key Figures Mar 2020

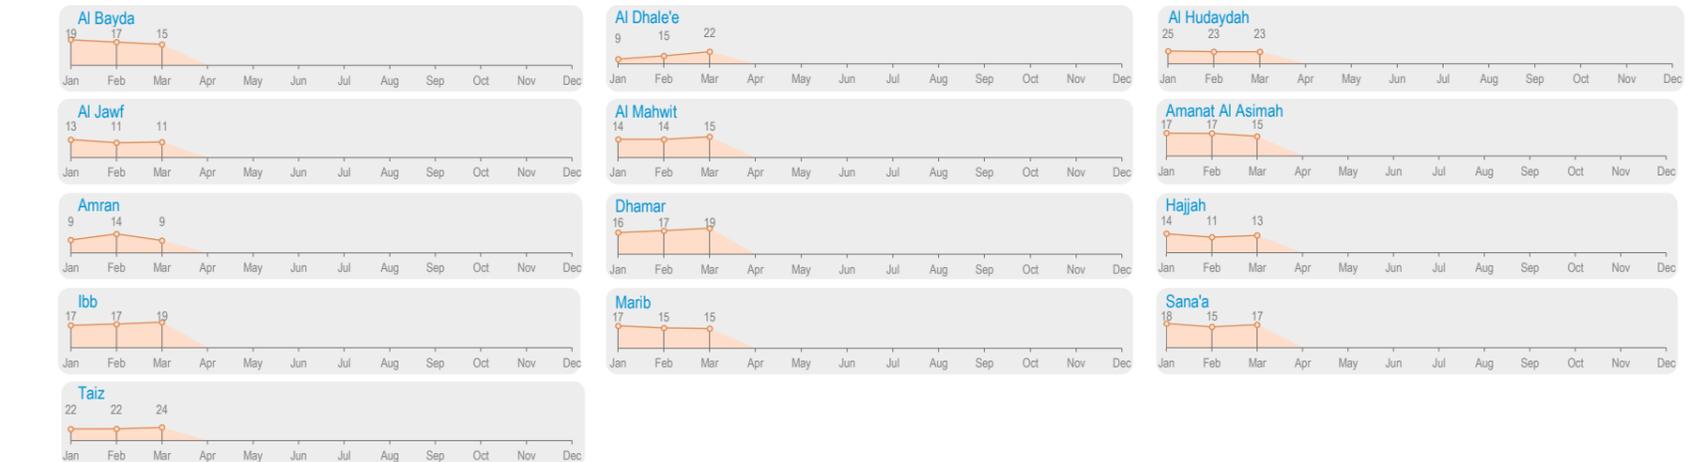

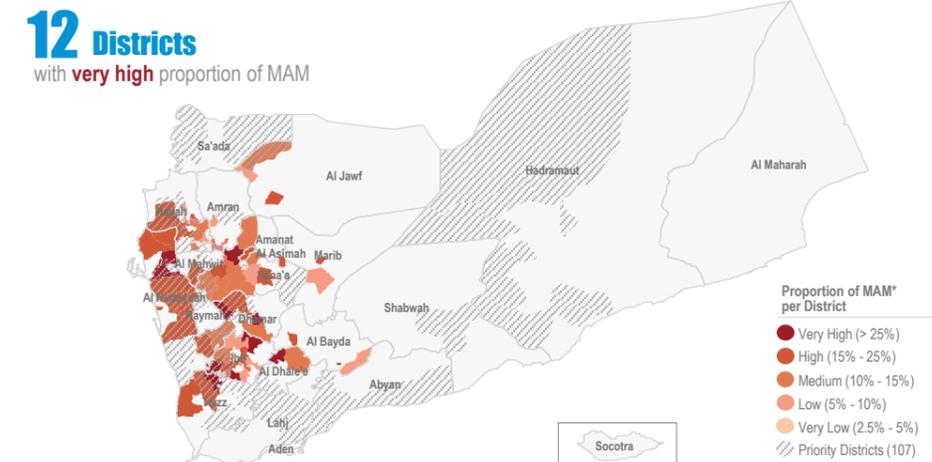

## Proportion† of Severe Acute Malnutrition (SAM)\* per District and Geographical Presence of Nutrition Sentinel Sites

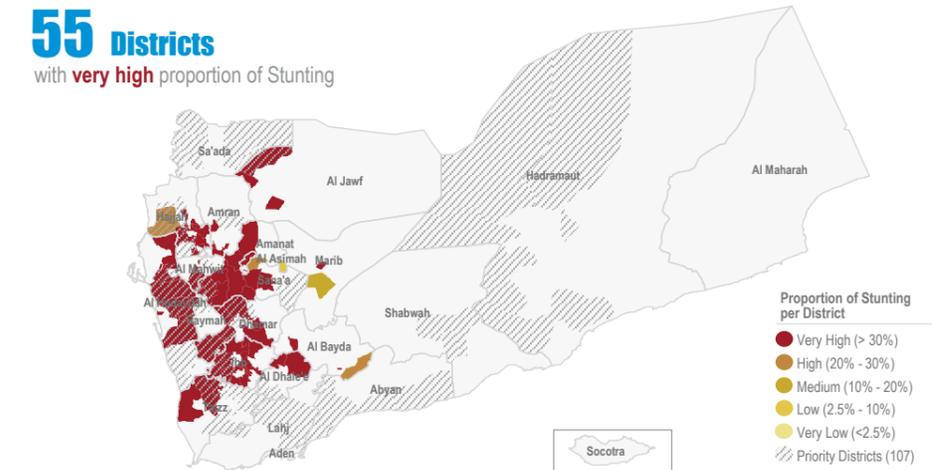

## Screened Children Mar

## Proportion† of Moderate Acute Malnutrition (MAM)\* Mar

## Proportion† of Stunting Mar

### Objectives of the Yemen Nutrition Surveillance System

- monitor children nutritional status
- early detection of malnutrition and case referral
- share information and trigger alert verification.

### Methodology:

Facility-based sentinel site surveillance system, established in district hospitals across the country

The system provides proportion of children under five found suffering from any forms of malnutrition, out of the total children screened. It is not a formal survey using sampling methods to produce representative results. The results only reflect the status of children who have attended the health facility in the month under review.

The system tracks WHO Global core nutrition indicators: Stunting, Wasting, Exclusive breastfeeding, Anemia.

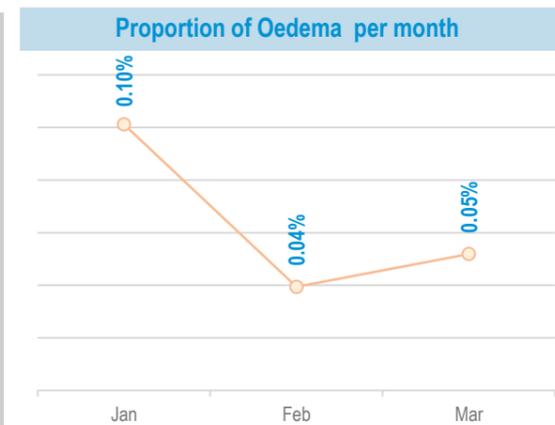

This bulletin is based on reports received by the health facility surveillance MoPHP teams.

WHO supports the MoPHP and constantly works to expand coverage and improve data quality.

With WHO technical support to national health authorities. Funded by the World Bank.
