Highlights

Cumulative figures

- The cumulative total from 27 April 2017 to 26 Nov 2017 is 959,810 suspected cholera cases and 2,219 associated deaths, (CFR 0.23%), 1049 have been confirmed by culture.
- 59.2 % of death were severe cases at admission
- The total proportion of severe cases among the suspected cases is 18%
- The national attack rate is 348.51 per 10,000. The five governorates with the highest cumulative attack rates per 10,000 remain Amran (814), Al Mahwit (773), Al Dhale'e (642), Abyan (492) and Sana'a (465).
- Children under 5 years old represent 28% of total suspected cases.
- In total, 21,754 rapid diagnostic tests (RDT) have been performed which represents 22.7% coverage.
- 2,376 cultures have been performed which represents 22.3% coverage.
- The last positive culture was on 7 Nov 2017 in Al Garahi district.
- Among the 305 affected districts, 44 districts in 12 governorates (Abyen, Al Baydha, Al Hudeideh, Al mahrah, Hajjah, Lahj ,Marib, Mokalla, Sa'dah, Seyoun, Shabwah, Taizz) did not report any suspected case the last three consecutive 3 weeks.

Governorate and District level

- At governorate level, the trend from W44-W46 decrease or was stable in all governorates.

Trends

- The weekly number of cases is decreasing for the 11 consecutive weeks.
- The weekly proportion of severe cases has significantly decreased representing now 10% of the admitted cases.
- The use of RDTs has significantly increased since week 40.

Week 47

- 13,068 suspected cases and 5 associated deaths were reported.
- 10 % are severe cases
- 817 RDTs were performed, 129 were positive
- 0 Positive culture

Trends in cases by age distribution and dehydration status

Figure 2d | Trend in proportion of cases aged under 5

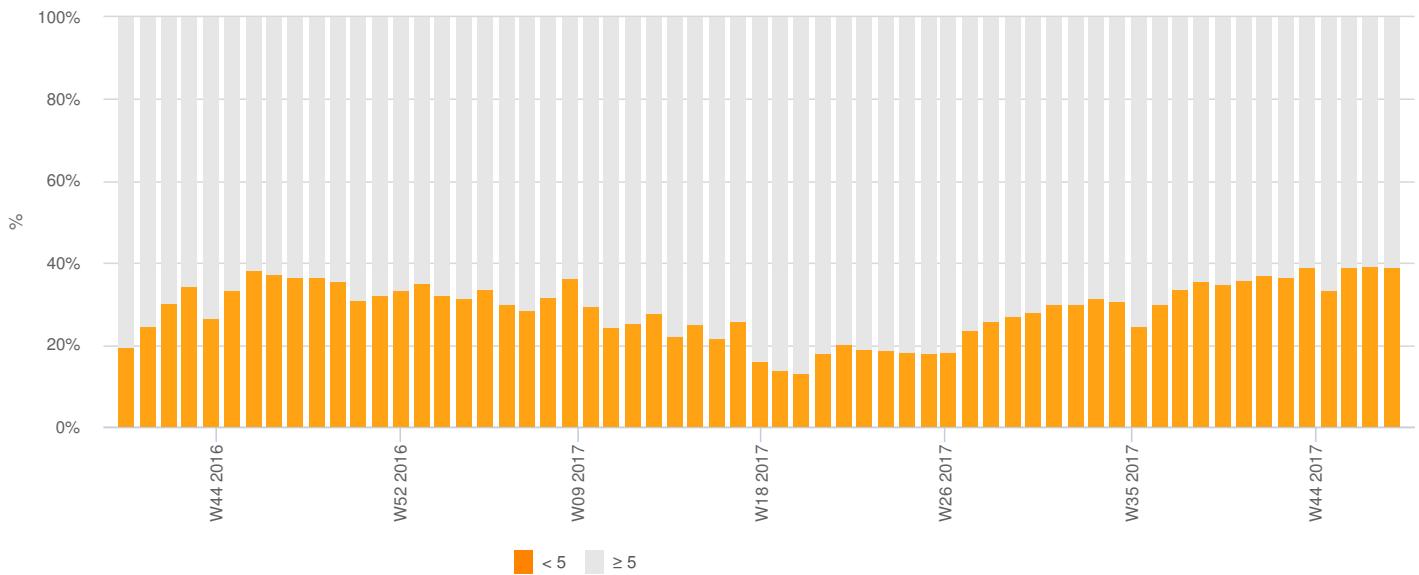

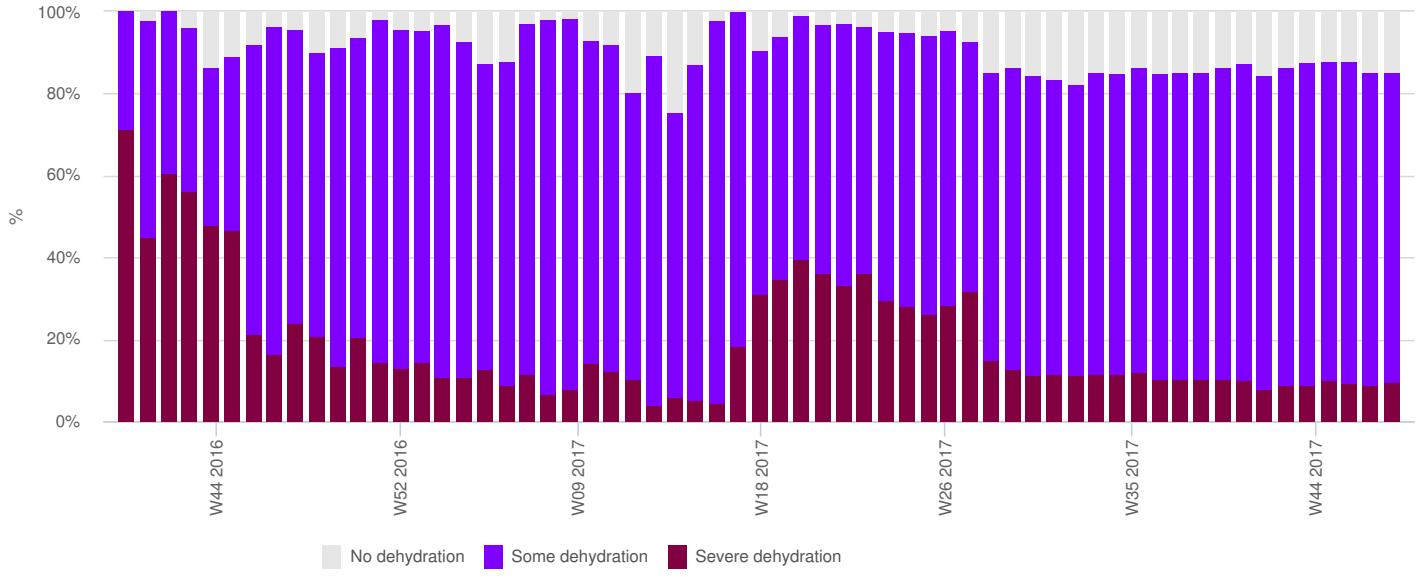

Figure 2e | Trend in proportion of cases by dehydration status

¹ Trends in proportional age distribution and dehydration status always add up to 100% and do not give any indication of the number of cases reported. For this reason, these may reflect cases that are not visible in the epidemic curve due to the scale of the y-axis and the huge difference in the case counts between the first and second waves of the outbreak.
