29 January 2024, Manama, Bahrain – A 2-day mission was conducted in Manama, Bahrain, on 23–24 January 2024 to pilot a rapid mini evaluation of Bahrain's seasonal influenza vaccination programme.

Seasonal influenza causes high morbidity and mortality around the world each year. Although safe and effective influenza vaccines are available and have been in use for more than 60 years, uptake of influenza vaccines in the WHO Eastern Mediterranean Region remains suboptimal. There are several challenges to improving the coverage rate, such as lack of local evidence, competing health priorities, limited collaboration among stakeholders, and vaccine hesitancy and misconceptions.
