

22 September 2015 -- The WHO Regional Centre for Environmental Health Action held a 3-day expert meeting on water scarcity and health in Amman, Jordan, from 15 to 16 September 2015. The aim of the workshop was to provide technical support to countries interested in replicating the process of generating evidence to support development of national policies on domestic water requirements for health, an initiative that was piloted in Jordan in 2012-2013.

The objectives of the meeting were to:

- scrutinize and update the protocol and methodology for generating evidence to support development of national policies on domestic water requirements for health
- train the teams on the methodology
- familiarize the teams with the Jordanian experience in the application of the protocol and methodology for assessing the impact of water scarcity on health
- introduce the terms of reference for developing the technical and financial proposal for national implementation.

The meeting was attended by experts from the Palestinian National Institute of Public Health, the Palestinian Central Bureau of Statistics, and Teheran University of Medical Sciences.
