The Index Medicus for the Eastern Mediterranean Region, one of the major projects of the
Virtual Health Sciences Library, was initiated in response to a pressing need to index health and
biomedical journals from the Region. The vast majority of these journals are not currently
indexed internationally or abstracts provided. Mapping regional health and biomedical literature
will increase its exposure at national, regional and global levels. The Index Medicus is a unique
tool for indexing, abstracting, recording, archiving and sharing regional health information.
