

The third global survey on eHealth conducted by the WHO Global Observatory for eHealth (GOe) had a special focus – the use of eHealth in support of universal health coverage. eHealth plays a vital role in supporting universal health coverage in a variety of ways relating to cost, access and quality of services.

The survey was undertaken between April and August 2015 and represents the most current information on the use of eHealth in participating countries. The Atlas presents data collected on 125 WHO Member States among which 15 countries of the Region participated (response rate: 68.2%).
