WHO EMRO | Cholera outbreaks

Highlights
- In September 2019, a total of 134 suspected cholera cases and no related death was reported from Banadir region.
- From December 2017 to September 2019, a total of 8,710 suspected cholera cases including 48 related deaths (CFR: 0.53 %) were reported from six regions (Banadir, Gedo, Hiran, Lower Jubba, Middle Shabelle and Lower Shabelle). The districts with the highest cumulative number of cases are: Kismayo (2,305 (25.46%)), Hoddan 1,000 (12.17%) and Madina 903 (10.37%).
- The number of reported cases during the month of September shown a significant decline around (22%) as compared to the previous month (172).
- This cholera outbreak is continuation of the outbreak that started since December 2017 but there was a gap in the reporting of the cases in the first seven weeks of 2019 due to closure of the main Cholera Treatment Center (CTC) in Banadir. The CTC has been reopened in early February to manage the suspected cholera cases and the center has started reporting the cases again.
- A total of 813 stool specimens were collected since December 2017. Of which, only 161 were laboratory confirmed for Vibrio cholerae, serotype Ogawa.

01 out of 18 regions reported suspected cholera cases in September 2019

Case fatality rate (CFR) 0%
