

10 May 2018 - oPt, Humanitarian actors and members of oPt Health Cluster attended a workshop led by the Health Cluster, in the West Bank and Gaza. Over 40 partners were trained on information tools developed by WHO as the lead cluster agency, in order to drive the emergency operational response on the ground.

Focusing on the current emergency situation in Gaza and the ongoing challenges facing the mobile health clinics in the West Bank, the workshop facilitated dialogue around information management as a fundamental tool to increase coordination and enhance the response.

Tools and resources available online include the Health Resources Availability Monitoring System (HeRAMS), Emergency Medical Teams (EMT) calendar, infographics, Situational Reports and the Health Cluster website, www.healthclusteropt.org.

“In the coming weeks, the Cluster will continue to develop online platforms for real time coordination and decision making”, Sara Halimah, Health Cluster Coordinator.
