

## Cholera in Yemen, monthly situation update, November 2016 Highlights, November

- As of 30 November 2016, a cumulative number of 7730 acute watery diarrhoea/cholera cases, including 82 related deaths (attack–rate 3.4%, case–fatality rate 1.1%) were reported from 135 districts.

- In November, 5489 new acute watery diarrhoea/cholera cases, including 35 associated deaths were reported.

- Of the 613 stool samples collected since the outbreak, 51 tested positive for V. cholerae in November.

- To date, 35% of all recorded acute watery diarrhoea/cholera cases all ected children under 5 years of age.

- As shown in the EPI curve, the trend of acute watery diarrhoea/cholera cases has gradually increased from EPI week 45 to 47.

- Three additional districts reported cases during this period, namely, Abyan, Dhamar and Raymah. Over 70% of all acute watery diarrhoea/cholera cases have been reported in Al-Hudaydah, Aden, Ta'izz, Al Bayda and Al Dhale'a governorates.
