

7 January 2021 – After Cyclone Gati struck Puntland State of Somalia on 22 November 2020, heavy rains and floods washed away homes, livestock, crops, and fishing boats. In its wake, the cyclone destroyed health facilities and safe sanitation systems in the area, leaving thousands of vulnerable people exposed without any shelter and livelihoods, as it hit districts in the midst of the coronavirus disease (COVID-19) pandemic, further affecting communities' economic recovery.

Twenty-nine-year-old Aamino Ahmed and her family were among the people who were forced to flee to internally displaced people (IDP) camps following the cyclone. Along with her husband and nine children, Aamino moved to the Isnino IDP camp in Bossaso, where they are currently struggling to have a means to earn a living and access to basic needs like food, water, sanitation and health care, which have been totally destroyed.

Understanding urgent needs of afflicted populations

By the end of December, the storm had killed 9 people and over 63 000 livestock (sheep and goats), and affected around 183 000 people.

Support provided so far

Since the cyclone struck, humanitarian partners and Somali authorities reached over 78 000 affected people with relief assistance as of 13 December. This support ranged from food,

emergency shelter, nutrition, health, protection, Camp Coordination and Camp Management (CCCM) services and WASH interventions.

Partners and organizations in the food security, livelihood and health and nutrition clusters have reached an estimated 72 000 affected people among those targeted. Shelter and WASH cluster partners have reached 25 000 and 38 000 people respectively, while the CCCM cluster is assisting about 26 000 people affected by the cyclone floods in Bossaso, one of the worst-hit cities.

Humanitarian response plans to avert further suffering
