Mogadishu, 24 April 2023 – The Federal Ministry of Health, in collaboration with the World Health Organization (WHO) and the United Nations Children's Fund (UNICEF), observed World Immunization Week under the global theme of "The Big Catch-Up" with a resolve to strengthen primary health care and routine immunization across the country and ensure that no one is left

behind.

World Immunization Week 2023 is being observed during the global COVID-19 pandemic and hence it has been given the theme of 'The Big Catch-Up'. World Immunization Week was initially endorsed in May 2012 by the World Health Assembly (WHO's decision-making body) and the first World Immunization Week was observed the same year across 180 Member States of WHO.

The Federal Minister for Health Dr Ali Haji, on this occasion expressed gratitude to WHO and UNICEF for coordinating and collaborating with multiple partners and helping his government to catch up on lost progress in essential immunization, as a result of the global pandemic. Acknowledging the worst ever drought gripping the country, resulting in huge population displacement and outbreaks of diseases, Dr Haji hoped that "in line with the theme of the year -"The Big Catch-Up", WHO and UNICEF would continue to support the Ministry of Health in building a strong immunization delivery system, sustain the progress made over the past few years in preventing a backslide of childhood immunization in the country and more importantly accelerate the campaign of "The Big Catch Up" to get back on track to ensure more people, particularly children, are vaccinated and protected from preventable diseases".

As per UNICEF and WHO estimates, routi:ne immunization coverage in Somalia is low compared to other countries, and has been further impacted by the COVID-19 pandemic. The Ministry of Health, in collaboration with WHO and UNICEF, has made progress during 2022 to bridge these significant gaps in immunization by scaling up its efforts to strengthen routine immunization across the country.

WHO Representative to Somalia Dr Mamunur Rahman Malik while referring to the setbacks caused by global pandemic to routine immunization in Somalia, said that "Thousands of children under 5 have missed routine immunization during the past 3 years. The pandemic has disrupted essential immunization services in the country. We may anticipate a backslide of over 20% in routine immunization coverage unless we are able to rapidly catch up on lost progress." He further said that, "WHO in collaboration with the Ministry of Health and UNICEF, is planning for a "Big Catch-Up" by developing an immunization recovery plan to catch up on all those children who have missed out on their routine immunization in the past 3 years, including all women of childbearing age and adults. This is our chance to restore immunization coverage to pre-pandemic levels and by working together with our partners, we can do it."

Since the start of the COVID-19 pandemic in 2020, a widespread decline in childhood vaccinations has occurred globally, putting millions of additional children at risk for vaccine-preventable diseases. The continued decline in vaccination coverage since then was likely a result of many factors, including strained health systems caused by the COVID-19 pandemic, coupled with the primary focus being on the delivery of COVID-19 vaccines. These stresses have led to challenges with supply chains, human resources, and financing. Increasing vaccine misinformation, disinformation and hesitancy also likely contributed to declines in some countries. The risk of vaccine-preventable disease outbreaks is likely to persist if urgent action is not taken to recover immunization programme losses, especially in countries like Somalia, where the health sector is under immense stress of dealing with multiple outbreaks of measles, cholera and circulating vaccine-derived poliovirus 2.
