

17 January 2022 – WHO has joined forces with King Salman Humanitarian Aid and Relief Centre to support malaria prevention and control efforts across the country.

As part of the malaria project, WHO, in partnership with KSrelief, has implemented vector control and indoor residual spraying campaigns in 13 governorates, reaching 5 424 381 people. Three main vector control interventions included space fogging, entomological surveillance, and community awareness to enhance detection and management of mosquitoes breeding sources.
