IMPORTANT DEFINITIONS

What is the COVID-19 Infodemic?

An infodemic is an overabundance of information, both online and offline. It includes deliberate attempts to disseminate wrong information to undermine the public health response and advance alternative agendas of groups or individuals. Mis- and disinformation can be harmful to people's physical and mental health; increase stigmatization; threaten precious health gains; and lead to poor observance of public health measures, thus reducing their effectiveness and endangering countries' ability to stop the pandemic. Misinformation costs lives. Without the appropriate trust and correct information, diagnostic tests go unused, immunization campaigns (or campaigns to promote effective vaccines) will not meet their targets, and the virus will continue to thrive. Furthermore, disinformation is polarizing public debate on topics related to COVID-19.

IMPORTANT CONTACTS

- The National Focal Person for COVID-19 is Dr Abdullah Asiri, Assistant Deputy for Preventive Health, MoH, email: AbdullahM.Asiri@moh.gov.sa
