
Situation update:

There has been no local circulation so far related to the circulating vaccine-derived poliovirus type 2 (cVDPV2) that was detected on 31 January 2024 in Cairo governorate, in Egypt.

In Somalia, cVDPV2 was confirmed in one new case in Bay, with a date of onset of paralysis of 8 March 2024, and an ES sample collected in Gedo on 11 March 2024. Both are linked to the SOM-BAN-1 emergence.

The environmental isolate confirmed on 24 January 2024 in White Nile State in Sudan was classified as cVDPV2 and is reported to be genetically linked to a cVDPV2 isolated in an AFP case in South Sudan - RSS–UNL-1. This emergence was also detected in Ethiopia.

In Yemen, ten cVDPV2 cases and six additional positive environmental sites have been reported, all from the northern governorates. The most recent virus isolations were from acute flaccid paralysis (AFP) cases reported from Ibb, and two from Al Hudaidah, with dates of onset of paralysis of 6 April 2024, 27 March 2024 and 8 March 2024 respectively.

Circulating vaccine-derived poliovirus type 2 (VDPV2) isolates, 2024 to date:

Djibouti: 0 AFP; 0 ES

Egypt: 0 AFP; 1 ES

Somalia: 2 AFP; 1 ES

Sudan: 0 AFP; 2 ES

Yemen: 10 AFP; 2 ES
